

# RETHINKBH+

The rebuilt mobile app for ABA clinicians—faster, smarter, and now ready to work offline.

RethinkBH+ was rebuilt from the ground up with in-house ABA clinical and business experts, turning the mobile experience into a modern, reliable tool that keeps clinicians focused on client care—not on the app. Real-time syncing, streamlined workflows, and now a fully self-initiated offline mode mean RethinkBH+ works the way clinicians do, wherever the day takes them.

## Why Clinical Is the Foundation

### Real-time syncing.

Data and session notes sync reliably to the web platform as clinicians work.

### Clean, clinician-first navigation.

A redesigned layout moves faster between calendar, data collection, session notes, and appointments.

### Recent client data at-a-glance.

The most current client information is surfaced right away, on the go.

### Appointment directions built in.

Locations link straight to turn-by-turn directions.

### Draft data view.

See exactly what's finished and what still needs to be completed.

### Verification notifications.

Clear alerts when staff or parent verifications are still needed.

### Consistent, payor-ready documentation.

Notes are clear, standardized, and easy for payors and caregivers to follow.

### Accessibility upgrades.

Built to work well for every clinician, on every device.

### Offline Mode available.

Clinicians can now activate a fully encrypted, HIPAA-compliant offline mode before a session, capture everything as usual, and sync back the moment they're reconnected.

You're in control. Clinicians activate offline mode themselves before a session—only the RethinkBH+ app goes offline, not the whole device.

Ready for the whole day. Activating it auto-preloads the next 12 hours of appointments; clinicians can preload extra clients manually.

Secure by design. Session notes, clinical data, and signatures are encrypted on-device and HIPAA-compliant, synced manually once you're reconnected.

### AI-Generated Session Summaries.

Accurate, data-driven summaries are generated directly from finalized session data—not templates—for consistent documentation.

### Group Sessions.

RBTs can collect data for multiple clients in one session, completing notes and verifications in a single workflow.

### BCBAs

Review, verify, and stay ahead of your team's documentation—online or off.

### RBTs

Walk into every session ready, take data your way, and sync when you're back online.

### Practice Leaders

Experience fewer documentation gaps, cleaner records, and a platform your clinicians actually want to use.
